

OPEN-SOURCE MESH COMMUNICATIONS

Off-Grid, Open-Source, **Encrypted Messaging**

MeshCore is a simple, secure, off-grid mesh communications system. Build your own low-cost, long-range, encrypted messaging network. You can still send messages even when WiFi, Cellular, and Starlink are down.

Built for the field, not the cloud

MIT licensed firmware, end-to-end encryption and LoRa radio — everything you need for true off-grid connectivity.

Open Source

MIT licensed firmware, tooling and libraries you can trust and contribute to.

Encrypted Messaging

Messages are end-to-end encrypted to ensure your chats stay private.

Long Range

Uses LoRa, long range, low power radio technology for true off-grid connectivity.

Low Power

Optimized power consumption allows batteries to last over a week on a single charge.

Public Channels

Join public group channels and discuss interesting topics with the mesh community.

Private Channels

Create private encrypted group channels for securely talking with friends and family.

Solar Powered Repeaters

Expand the range of your MeshCore network with solar powered repeaters in high locations.

MeshCore App

Download our free app, available on Android, iOS, Windows, Mac, Linux and Web.

Get the App, Buy a Node, Start Messaging!

1

Get the App

Install MeshCore on your phone or computer.
Keep an offline copy ready to use when the internet is unavailable.

GET THE APP

2

Buy a Node

Pick a supported LoRa device. Each user needs a "Companion Node" to connect them to the mesh network.

BUY A NODE

3

Flash & Connect

Use our Web Flasher to install the MeshCore firmware. Once flashed, pair your phone to the node and start chatting.

Simple Design

Get started fast with our super simple design. You'll be communicating on your own mesh network in no time!

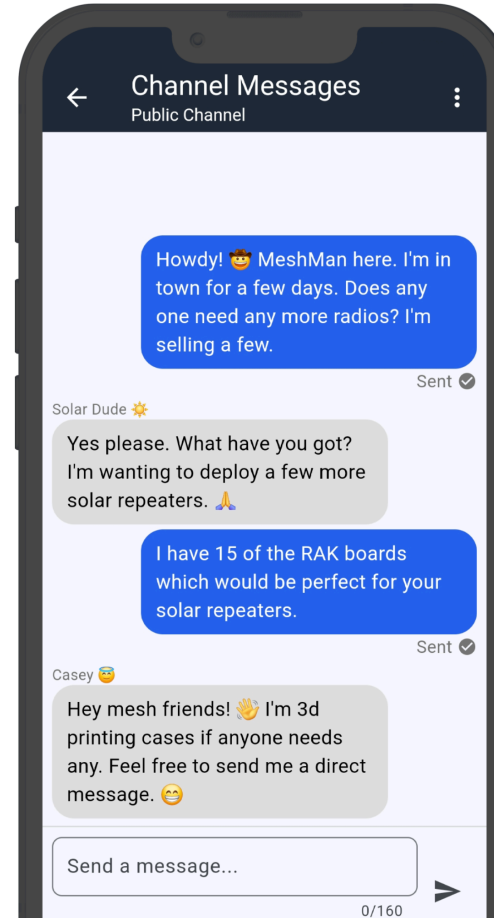

Secure Messaging

Direct messages are encrypted with your unique identity keys before they travel across the mesh to your intended recipient.

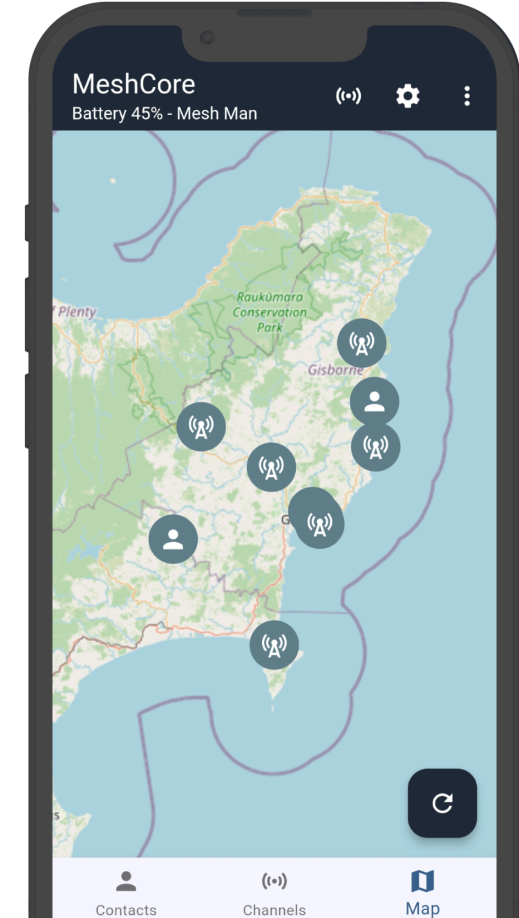

Custom Channels

Create your own channels. From private group chats with friends, to public messaging across a whole city. You're in control!

Network Map

Get a visual overview of your Mesh Network. Understand where you have coverage, and where you need more repeaters.
